Promoting First Relationships® in Pediatric Primary Care Workshop

A 1-day workshop for primary care pediatric providers to learn about the importance of early attachment and the relationship qualities that enhance social-emotional development.

February 27, 2016 - Watertown Hotel, Seattle

Registration Fee (in US dollars) is $250 which includes tuition, lunch, PFR in Pediatric Primary Care manual, and CD with handouts for well child checkups. Space is limited, register early at www.ncast.org

How can Promoting First Relationships® help medical providers in pediatric primary care?

PFR-PPC will help you:
- UNDERSTAND how to promote and support stable and secure early parent-child relationships in everyday office visits
- BEGIN TO SEE attachment behaviors and elements of healthy relationships that are happening in patient encounters through the use of videos and case studies
- LEARN skills that can be used by medical providers to strengthen a caregiver-child relationship during both well child care and challenging behavior visits
- REALIZE how both parents and medical providers can feel an increased sense of competence and confidence in addressing the social-emotional health of young children with PFR-PPC

What is Promoting First Relationships® in Pediatric Primary Care?
- A university based program adapted by pediatricians to help pediatric primary care providers support stable and secure early parent-child relationships
- A framework that operationalizes attachment and child development theory into applied practice and intervention strategies specifically for the pediatric office visit.
- A curriculum that also provides well-child check handouts for each visit (newborn – three years old) to share with parents
- Consultation strategies to promote infant/toddler mental health

Who Should Attend?
Pediatricians and Family Physicians, Pediatric and Family Nurse Practitioners, Care managers and other providers at community health centers.

About the Trainers
Jeannie Larsen, MD, is a Primary Care Pediatrician at Allegro Pediatrics in Bellevue, Washington and is a co-author of Promoting First Relationships in Pediatric Primary Care.

Nancy Thordarson, MD, is an affiliate assistant professor at the University of Washington and a Pediatrician at the Everett Clinic. Nancy is also a co-author of Promoting First Relationships in Pediatric Primary Care.
